

Kreiranje MVC pogleda

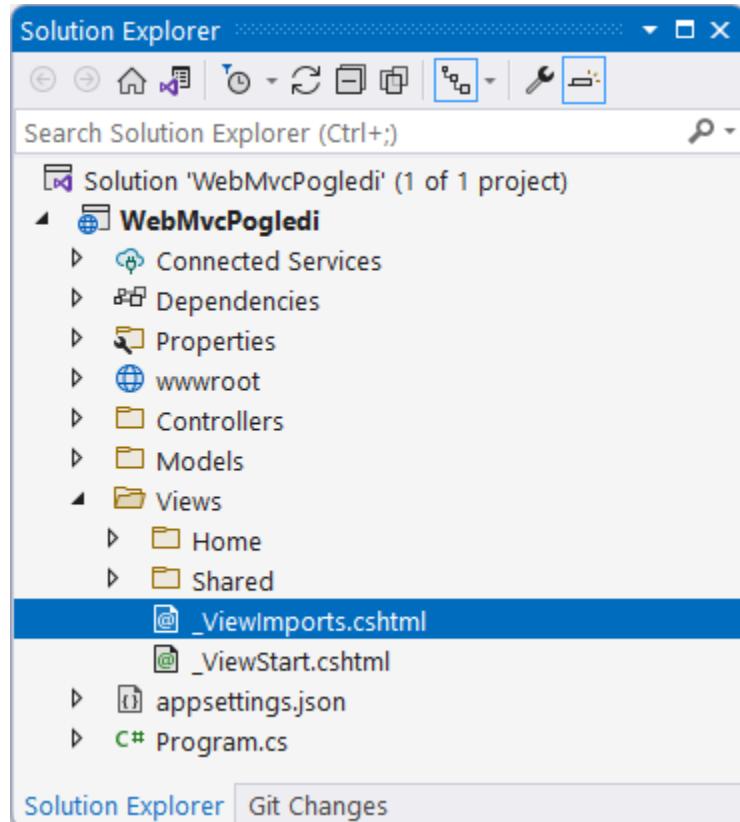

MVC pogled

- Kontroler prosleđuje podatke pogledu korišćenjem View metode
- Pogledi pridruženi kontroleru pod nazivom HomeController nalaze se u folderu Views/Home
- Ukoliko želimo da isti pogled pridružimo za dva ili više kontrolera stavljamo ga u folder Views/Shared

ASP.NET Core Web aplikacija

Fajl _ViewImports.cshtml

```
@using WebApp05
@using WebApp05.Models
@addTagHelper *, Microsoft.AspNetCore.Mvc.TagHelpers
```

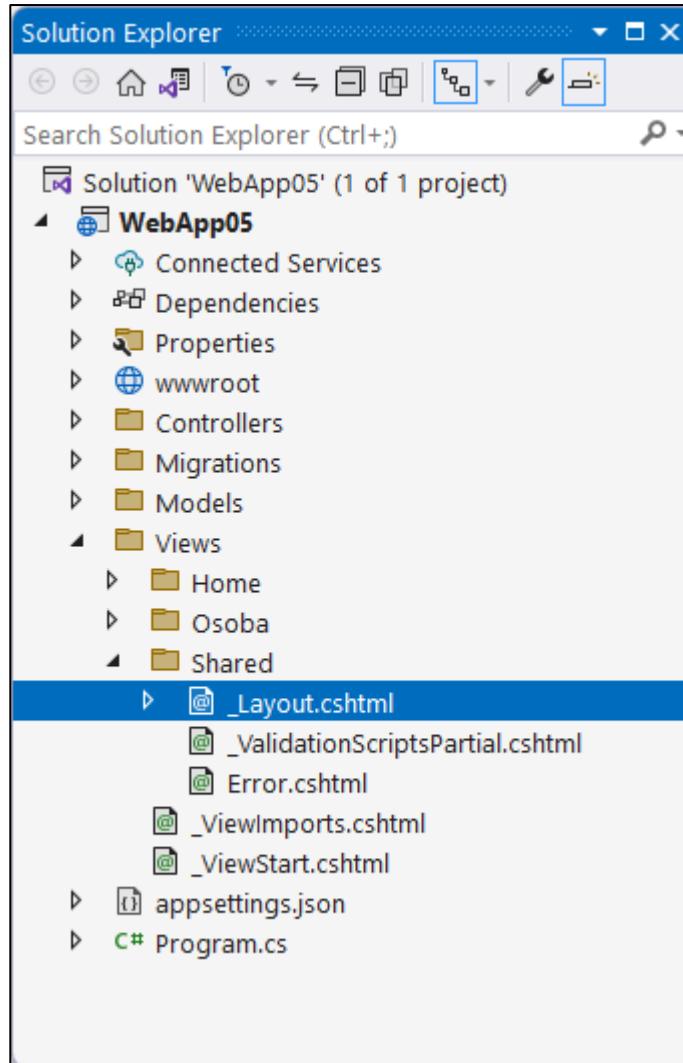

Direktive koje se dele između različitih pogleda smeštaju se unutar fajla _ViewImports.cshtml.
Nalazi se direktno unutar Views foldera.

Fajl _ViewStart.cshtml

```
@{  
    Layout = "_Layout";  
}
```

Služi za definisanje layout strane za svaku View stranu.
Nalazi se direktno unutar Views foldera.

Pogled _Layout.cshtml

Nalazi se u folderu Views/Shared

_Layout.cshtml – head deo

```
<head>
    <meta charset="utf-8" />
    <meta name="viewport" content="width=device-width, initial-scale=1.0" />
    <title>@ViewData["Title"] – WebApp05</title>
    <link rel="stylesheet" href("~/lib/bootstrap/dist/css/bootstrap.min.css" />
    <link rel="stylesheet" href("~/css/site.css" asp-append-version="true" />
    <link rel="stylesheet" href("~/WebApp05.styles.css" asp-append-version="true" />
</head>
```

_Layout.cshtml – body (header)

```
<header>
    <nav class="navbar navbar-expand-sm navbar-toggleable-sm navbar-light bg-white border-bottom box-shadow mb-3">
        <div class="container-fluid">
            <a class="navbar-brand" asp-area="" asp-controller="Home" asp-action="Index">WebApp05</a>
            <button class="navbar-toggler" type="button" data-bs-toggle="collapse" data-bs-target=".navbar-collapse" aria-controls="navbarSupportedContent"
                aria-expanded="false" aria-label="Toggle navigation">
                <span class="navbar-toggler-icon"></span>
            </button>
            <div class="navbar-collapse collapse d-sm-inline-flex justify-content-between">
                <ul class="navbar-nav flex-grow-1">
                    <li class="nav-item">
                        <a class="nav-link text-dark" asp-area="" asp-controller="Home" asp-action="Index">Home</a>
                    </li>
                    <li class="nav-item">
                        <a class="nav-link text-dark" asp-area="" asp-controller="Home" asp-action="Privacy">Privacy</a>
                    </li>
                </ul>
            </div>
        </div>
    </nav>
</header>
```

WebApp05 Home Privacy

_Layout.cshtml – glavna oblast strane

- Može biti samo jedna @RenderBody() metoda po layout strani
- Pomoću RenderBody() metode specificira se deo layout strane koji će biti popunjeno sadržajem strane koja implementira layout stranu

```
<div class="container">
    <main role="main" class="pb-3">
        @RenderBody()
    </main>
</div>
```

_Layout.cshtml – footer

```
<footer class="border-top footer text-muted">
    <div class="container">
        © 2023 – WebApp05 – <a asp-area="" asp-controller="Home"
            asp-action="Privacy">Privacy</a>
    </div>
</footer>
<script src="~/lib/jquery/dist/jquery.min.js"></script>
<script src="~/lib/bootstrap/dist/js/bootstrap.bundle.min.js"></script>
<script src="~/js/site.js" asp-append-version="true"></script>
@await RenderSectionAsync("Scripts", required: false)
</body>
```

_Layout.cshtml – footer

- Metoda RenderSection() služi za definisanje sekcije na strani koja implementira layout stranu
- Sekciju moramo definisati na strani koja implementira layout osim ako ne napišemo **required: false**

Kreiranje Index pogleda

Index.cshtml - 1.deo

```
@model IEnumerable<WebApp05.Models.Osoba>
@{
    ViewData["Title"] = "Index";
}

<h2>Index</h2>

<p>
    <a asp-action="Create">Create New</a>
</p>
<table class="table">
    <thead>
        <tr>
            <th>
                @Html.DisplayNameFor(model => model.Ime)
            </th>
            <th>
                @Html.DisplayNameFor(model => model.Prezime)
            </th>
            <th>
                @Html.DisplayNameFor(model => model.Adresa)
            </th>
        <th></th>
    </tr>
</thead>
<tbody>
```

Index.cshtml - 2.deo

```
@foreach (var item in Model) {
    <tr>
        <td>
            @Html.DisplayFor(modelItem => item.Ime)
        </td>
        <td>
            @Html.DisplayFor(modelItem => item.Prezime)
        </td>
        <td>
            @Html.DisplayFor(modelItem => item.Adresa)
        </td>
        <td>
            <a asp-action="Edit" asp-route-id="@item.OsobaId">Edit</a> |
            <a asp-action="Details" asp-route-id="@item.OsobaId">Details</a> |
            <a asp-action="Delete" asp-route-id="@item.OsobaId">Delete</a>
        </td>
    </tr>
}
</tbody>
</table>
```

Index pogled

The screenshot shows a web browser window titled "Index - WebMvcPogledi". The address bar displays "localhost:5267/Osoba". The page content is titled "Index" and includes a "Create New" link. A table lists two entries:

| Ime osobe | Prezime osobe | Adresa | |
|-----------|---------------|--------------|---|
| Marko | Marković | Glavna 5 | Edit Details Delete |
| Ivan | Petrović | Beogradska 7 | Edit Details Delete |

At the bottom, there is a copyright notice: "© 2022 - WebMvcPogledi - [Privacy](#)".

Anchor Tag helper

- Tag helper omogućava korišćenje serverskog koda u kreiranju i renderovanju HTML elemenata u razor fajlovima
- Većina ugrađenih tag helpera se odnosi na postojeće HTML elemente i obezbeđuju serverske atributе za element
- Možemo kreirati i sopstvene tag helpere
- Anchor tag helper dodaje nove atributе elementu `<a>...`
 - Atribut **asp-controller** specificira kontroler koji se koristi za generisanje URL adrese
 - Ako se ne specificira kontroler, onda se zove podrazumevani kontroler koji poziva pogled
 - Atribut **asp-action** specificira metodu kontrolera koja se koristi za generisanje URL adrese
 - Atribut **asp-route-** bilo koju vrednost koji prosledimo nakon crtice tretira se kao parametar rute, npr. `asp-route-id`

HtmlHelper klasa metoda DisplayNameFor()

- Klasa HtmlHelper koristi se za renderovanje html kontrola u pogledu
- Properti Html pogleda služi da pristupimo instanci klase HtmlHelper
- Metoda **DisplayNameFor()** prikazuje ime svojstva odgovarajućeg člana model klase
- Prikazani tekst zavisi od modela, tj. da li se koristi anotacija [Display(Name="")] prilikom definisanja polja klase

```
<th>
    @Html.DisplayNameFor(model => model.Ime)
</th>
```

```
<th>
    Ime osobe
</th>
```

Metoda DisplayFor() HtmlHelper klase

- Prikazuje vrednost određenog svojstva objekta model klase
- Ako je definisan [DisplayFormat] u zavisnosti od toga će biti prikazan npr. kratki format datuma

```
<td>
    @Html.DisplayFor(modelItem => modelItem.Adresa)
</td>
```

```
<td>
    Glavna 5
</td>
```

Modifikovani Index pogled

```
@model IEnumerable<Osoba>

@{
    ViewData["Title"] = "Index";
}

## Index

Nova osoba

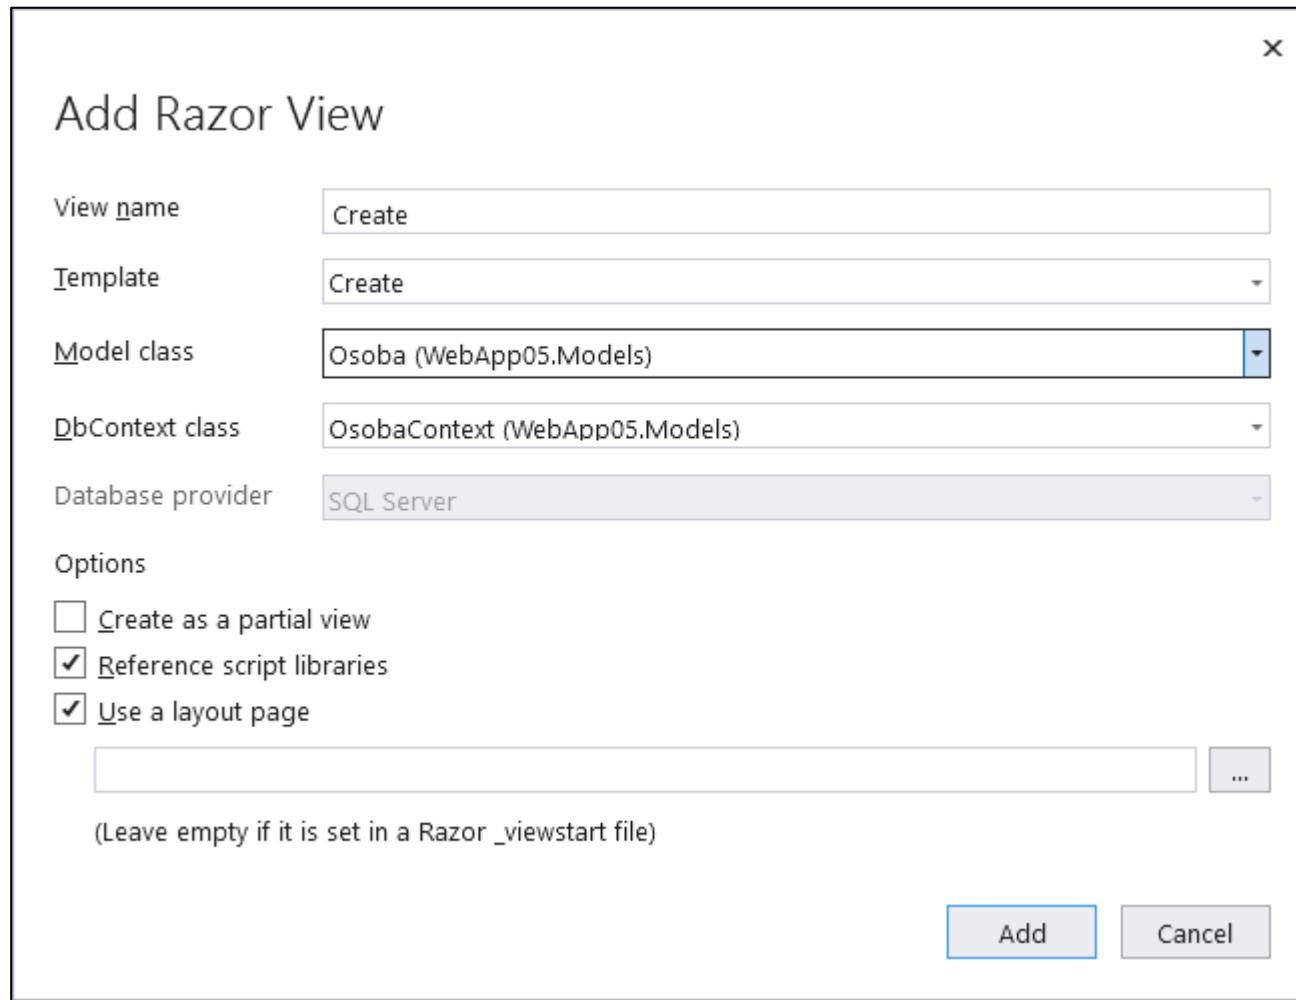

| Ime | Prezime | Adresa |
|-----|---------|--------|
|     |         |        |

```

```
@foreach (Osoba os in Model) {
    <tr>
        <td>
            @os.Ime
        </td>
        <td>
            @os.Prezime
        </td>
        <td>
            @os.Adresa
        </td>
        <td>
            Promeni |
            Detalji |
            Obriši
        </td>
    </tr>
}
</tbody>
</table>
</table>
```

Kreiranje pogleda Create

Deo pogleda Create.cshtml

```
@model Osoba
```

```
<div class="row">
    <div class="col-md-4">
        <form asp-action="Create">
            <div asp-validation-summary="ModelOnly" class="text-danger"></div>
            <div class="form-group">
                <label asp-for="Ime" class="control-label"></label>
                <input asp-for="Ime" class="form-control" />
                <span asp-validation-for="Ime" class="text-danger"></span>
            </div>
            <div class="form-group">
                <label asp-for="Prezime" class="control-label"></label>
                <input asp-for="Prezime" class="form-control" />
                <span asp-validation-for="Prezime" class="text-danger"></span>
            </div>
            <div class="form-group">
                <label asp-for="Adresa" class="control-label"></label>
                <textarea asp-for="Adresa" class="form-control"></textarea>
                <span asp-validation-for="Adresa" class="text-danger"></span>
            </div>
            <div class="form-group">
                <input type="submit" value="Create" class="btn btn-primary" />
            </div>
        </form>
    </div>
</div>
```

Pogled Create

The screenshot shows a web browser window titled 'Create - WebApp05'. The address bar displays 'localhost:5207/Osoba/Create'. The page content is titled 'Create' and 'Osoba'. It contains three input fields: 'Ime osobe', 'Prezime osobe', and 'Adresa'. Below these fields is a blue 'Create' button and a link 'Back to List'.

Form tag helper

- Generiše action atribut forme na osnovu imena kontrolera i imena akcione metode
- Generiše skriveni Request Verification Token da bi se sprečilo falsifikovanje zahteva
- POST metoda kontrolera proverava postojanje ovog tokena [ValidateAntiForgeryToken]
- Atribut **asp-controller** specificira kontroler koji se koristi za generisanje URL adrese
- Ako se ne specificira kontroler, onda se zove podrazumevani kontroler koji poziva pogled
- Atribut **asp-action** tag specificira metodu kontrolera koja se koristi za generisanje URL adrese

```
<form asp-action="Create">  
  </form>
```

Generisani html od strange form tag helpera

```
<form action="/Osoba/Create" method="post">
<input name="__RequestVerificationToken" type="hidden"
value="CfDJ8IXkRQSWb91NvnaXzX4PxXDfx8YYsILj5InuwItTLCxphmPvX6v1N
4lVTEWFb2djPuxFza5Eot5ibRNQqZd_FNXbPs4AZZP29oJFMhqcPJXKMEuAftQBH
Juz9t3xEAF_gclh2Ay4Y3goZaZbi_1oA18" />
</form>
```

Label Tag Helper

- Generiše `<label>` element za svojstvo modela
- Atribut **asp-for** specificira svojstvo modela
- Generiše vrednost za for atribut

```
<label asp-for="Ime" class="control-label"></label>
```

Generisani HTML:

```
<label class="control-label" for="Ime">Ime osobe</label>
```

Input Tag Helper

- Generiše HTML <input> element za polje modela u razor pogledu
- Tag **asp-for** specificira svojstvo modela za koje se kreira input element
- Setuje atribut type generisanog input elementa u zavisnosti od tipa polja modela
- Generisani type atribut može se prebrisati ako ga ponovo definišemo za input element
- Generiše validate attribute data-val- iz anotacionih atributa za polja klasa modela
 - data-val
 - data-val-required
 - data-val-length-max
 -

```
<input asp-for="Ime" class="form-control" />
```

Generisani html od strane input tag helpera

```
<input asp-for="Ime" class="form-control" />
```

```
<input class="form-control" type="text" data-val="true" data-val-length="Maksimalno 30 karaktera"  
data-val-length-max="30" data-val-required="Morate uneti ime" id="Ime" name="Ime" value="" />
```

Ubacivanje validacionih biblioteka u Razor pogled:

```
@section Scripts {  
    @{await Html.RenderPartialAsync("_ValidationScriptsPartial");}  
}
```

_ValidationScriptsPartial.cshtml

```
<script src="~/lib/jquery-validation/dist/jquery.validate.min.js"></script>
<script src="~/lib/jquery-validation-unobtrusive/jquery.validate.unobtrusive.min.js"></script>
```

Atributi za validaciju su definisani unutar bilioteke jquery.validate.unobtrusive.js

Validation Message Tag Helper

- Dodaje atribut **asp-validation-for** span elementu
- Pomoću atributa **asp-validation-for** se specificira properti modela za koji se prikazuje validaciona greška
- Generiše data-valmsg-for="svojstvo" atribut u span element
- Ovaj atribut prikazuje validacionu grešku unutar span elementa za određeno svojstvo
- Prikazana greška je rezultat klijentske validacije
- Validacija se takođe izvršava i na serveru

```
<span asp-validation-for="Ime" class="text-danger"></span>
```

```
<span class="text-danger field-validation-valid" data-valmsg-for="Ime" data-valmsg-replace="true"></span>
```

Validation Summary Tag Helper

- Dodaje atribut **asp-validation-summary** u div element
- Vrednost ovog atributa može biti:
 - ValidationSummary.All - prikazuju se validacione greške na nivou propertija i na nivou modela
 - ValidationSummary.ModelOnly - prikazuju se validacione greške samo na nivou modela
 - ValidationSummary.None

```
<div asp-validation-summary="ModelOnly" class="text-danger"></div>
```

Validacione greške na nivou modela

The screenshot shows a web browser window titled 'Create - WebMvcPogledi' at 'localhost:5267/Os...'. The page has a header 'WebMvcPogledi' and a title 'Create Osoba'. It contains four input fields: 'Ime osobe' (Name), 'Prezime osobe' (Last name), 'Adresa' (Address), and a large 'Adresa' text area. Each field has a red validation message above it: 'Morate uneti ime' (You must enter a name), 'Morate uneti prezime' (You must enter a last name), 'Morate uneti adresu' (You must enter an address), and 'Morate uneti adresu' (You must enter an address) respectively. Below the inputs are two buttons: a blue 'Create' button and a blue 'Back to List' link. At the bottom, there is a copyright notice: '© 2022 - WebMvcPogledi - [Privacy](#)'.

    <dd class = "col-sm-10">
        @Html.DisplayFor(model => model.Ime)
    </dd>
    <dt class = "col-sm-2">
        @Html.DisplayNameFor(model => model.Prezime)
    </dt>
    <dd class = "col-sm-10">
        @Html.DisplayFor(model => model.Prezime)
    </dd>
    <dt class = "col-sm-2">
        @Html.DisplayNameFor(model => model.Adresa)
    </dt>
    <dd class = "col-sm-10">
        @Html.DisplayFor(model => model.Adresa)
    </dd>
</dl>
```

Delete.cshtml-2

```
<form asp-action="Delete">
    <input type="hidden" asp-for="OsobaId" />
    <input type="submit" value="Delete" class="btn btn-danger" /> |
    <a asp-action="Index">Back to List</a>
</form>
```

Strana za brisanje

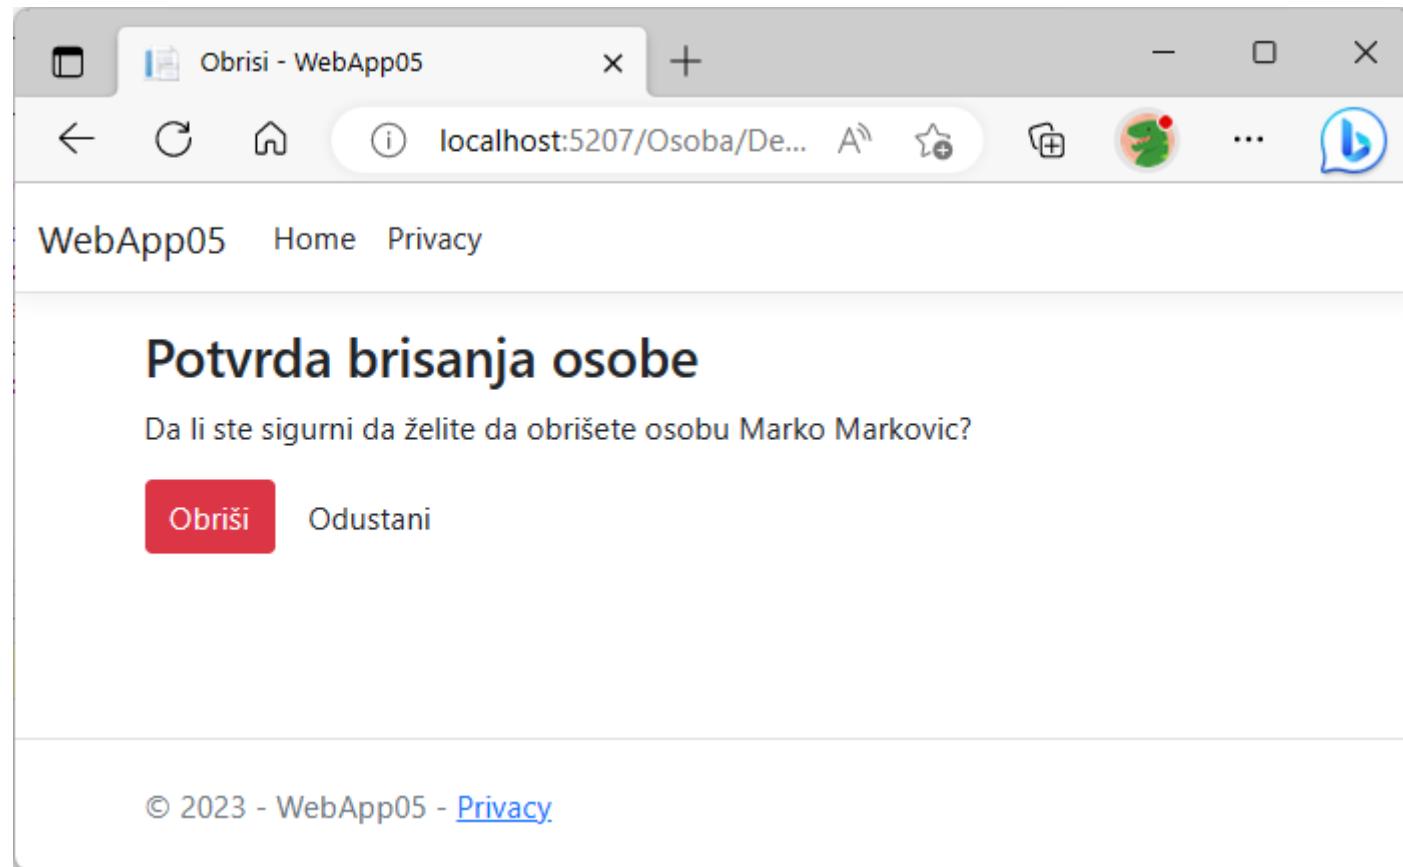

Izmena Delete pogleda

```
@model Osoba
{@
    ViewData["Title"] = "Obrisni";
}
<h2>Potvrda brisanja osobe</h2>

<p>Da li ste sigurni da želite da obrišete osobu @Model.Ime
@Model.Prezime?</p>

<form asp-action="Delete" asp-route-id="@Model.OsobaId" method="post"
class="form-horizontal">
    <div class="form-group">
        <input type="hidden" asp-for="OsobaId" />
        <div class="col-md-offset-2 col-md-10">
            <input type="submit" value="Obriši" class="btn btn-danger" />
            <a asp-action="Index" class="btn btn-default">Odustani</a>
        </div>
    </div>
</form>
```

Pitanje 1

Ukoliko želimo da isti pogled pridružimo za dva ili više kontrolera stavljamo ga u folder:

- a. Views/Home
- b. Views/Shared
- c. Views/Index

Odgovor: b

Pitanje 2

Index pogled koji odgovara kontroleru OsobaController je fajl:

- a. \Views\Osoba\Index.cshtml
- b. \Views\OsobaController\Index.cshtml
- c. \Views\Index.cshtml
- d. \Models\Osoba\Index.cshtml

Odgovor: a

Pitanje 3
